

Thank you for joining Heritage Specialty Pharmacy's vein mapping educational session!

Today we learned about our veins and used a device called a vein viewer to help locate the best veins for access. The vein viewer uses infrared light that reflects a map of our veins onto our skin.

This light helps us discover the best veins for access and we use the character arms to draw these veins as a general reference for future need. We hope to have instilled confidence in vein finding and fun while learning!

Vein Viewer Disclaimer – Educational Use Only

The vein viewer is for **educational demonstration only**. It is **not a medical device** and should **not be used for diagnosis, treatment, or medical decisions**. Use is limited to **community events** and/or **patients of Heritage Specialty Pharmacy**. Operators may **not be licensed medical professionals**.

Any images or vein diagrams are for **general reference only** and **not medical advice**. Vein appearance may vary based on factors like **hydration**. By participating, you acknowledge and **consent** to this educational use and understand it **does not replace professional medical care**.
